Ovsyankin, M. A.
SOLAR RADIO BRIGHTNESS DISTRIBUTION AT WAVELENGTHS OF 50 cm AND 1m. tr. by P. A. Kazakov. [1962] 2p. 4 refs. [CSIRO] Trans. 5249. Order from LC or SLA ini$1.80, ph$1.80 61-19374

Trans. of Solnechnyye Dannyye (USSR) 1959, no. 10, p. 75-77.

Curves were obtained for the radio brightness distribution in the equatorial and polar regions at 50 cm, and in the equatorial region at 1m. A brightening of about 60% in relation to the Sun's centre was detected at 50 cm with a peak intensity at a distance of $0.65R_{\odot}$. In the polar region the brightening was less pronounced. The brithtening was shifted towards the centre, it was not at the limb. In its form, the radio Sun is similar to an ellipse. It is slightly flattened in the polar region. The brightening was not detected at 1m. Results obtained agree with the theoretical ideas on the distribution of temperature and density in the corona, and with the experimental (Astronomy--Astrophysics, TT, v. 5, no. 11) (over)
